

Using Bottom-Hole-Temperatures from Oil and Gas Wells to Evaluate the Geothermal Potential
of Hydrocarbon Basins in Colorado

Paul Morgan and Matt Sares

Colorado Geological Survey, 1313 Sherman St., Rm. 715, Denver, CO 80203

As improvements in binary power-plant technology allow electricity generation from lower and lower temperature hydrothermal resources, hydrocarbon basins under normal hydrostatic pressures are becoming potential geothermal resource targets. As with all geothermal resources, tns eneration from rA
